Overdue customers

250

Across 312 loan accounts

Overdue now

186,450.00

AZN - verified source balances

Eligible to call

132

Restrictions already applied

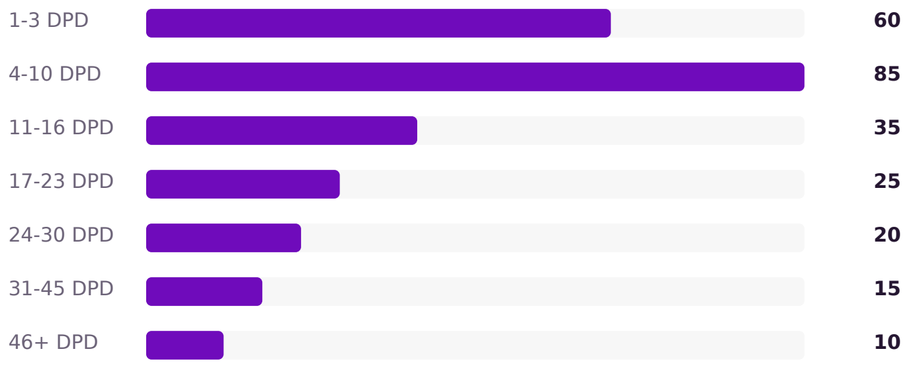

Received today

18,420.00

AZN - net of posted reversals

Delinquency distribution

Customer count - operational DPD bands

Daily execution

Distinguish attempts, unique customers and verified conversations

PTPs due today — **27**

Commitments reaching their deadline

Critical exceptions — **8**

Source, payment or contact issues

Agent planning reference — **480**

Successful contacts/day - source assumption

Priority customers - eligible now

Customer	DPD	Overdue AZN	ERA AZN	Action bucket	Next action	Owner
Demo customer 001 C-DEMO-001	7	499.24	4,200.00	10 - Critical	Senior call	Senior team
Demo customer 003 C-DEMO-003	12	260.00	495.00	9 - Very high	Agent call	Regular team
Demo customer 002 C-DEMO-002	24	225.50	337.00	8 - High	Agent call	Regular team

S03 / MY PRIORITIZED WORK QUEUE

My prioritized work queue

Common ERA ranking, customer-level contact rules and capacity-aware assignment.

Get next customer

Assigned to me	Callable now	Callbacks due	Blocked / deferred
24	18	3	6
Unique customers	Checked at task claim	Authorized times only	Reasons remain visible

Queue: My assigned cases | Contact eligibility: All statuses | DPD band: All early bands | Action bucket: All buckets | Policy version: Draft 2026.10 | Saved views

Customer / CIF	DPD	Overdue AZN	Exposure AZN	ERA AZN	Action bucket	Next action	Eligibility
Demo customer 001 C-DEMO-001	7	499.24	10,000.00	4,200.00	10 - Critical	Senior call	Eligible now
Demo customer 005 C-DEMO-005	6	405.60	8,000.00	1,760.00	9 - Very high	Agent call	Cooldown to 1 Nov
Demo customer 003 C-DEMO-003	12	260.00	2,500.00	495.00	9 - Very high	Agent call	Eligible now
Demo customer 002 C-DEMO-002	24	225.50	1,000.00	337.00	8 - High	Agent call	Eligible now
Demo customer 004 C-DEMO-004	2	180.00	4,000.00	Unavailable	Unscored	Manual review	Rule not supplied
Demo customer 006 C-DEMO-006	36	590.00	3,200.00	Out of scope	Later-stage	Review / handover	Separate policy

ERA ranks the financial roll-risk amount. A high score never bypasses cooldown, payment freshness, ownership, or customer restrictions.

S04 / DEMO CUSTOMER 001

Demo customer 001

C-DEMO-001 - unsecured AZN cash loan - preferred language AZ - verified contact on file.

Record contact

Overdue now
499.24
AZN - due 20 Oct

Principal outstanding
10,000.00
AZN - includes overdue principal

Max eligible DPD
7
One coordinated customer case

Model exposure
10,000.00
Demo definition - principal only

Loan relationship

Imported contract and financial position are read-only

Loan / product
L-DEMO-001 / Annuity cash loan

Next contractual due
20 Nov 2026

Monthly installment
499.24 AZN

Nominal annual rate
18.00% / 24 months

View loan and repayment schedule

Activity timeline

Customer-wide record across all related loan accounts

- 27 Oct / 09:59
  Task claimed by Senior Agent A
- 27 Oct / 09:58
  Core balances refreshed and eligibility rechecked
- 27 Oct / 09:00
  Draft decision snapshot - Class 8 / ERA 4,200.00
- 20 Oct / end of day
  First contractual installment remains unpaid

Why this customer?

Model class and action bucket are separate

Probability source	**Draft tree / Class 8**
Roll probability	**42.0%**
ERA	**4,200.00 AZN**
Action bucket	**10 of 10**
Recommended action	**Senior agent call**
Effective action	**Eligible - senior queue**

Available actions

Create promise to pay

Request repayment support

No real call or message in this design preview.

S05 / LOAN DETAIL & ANNUITY SCHEDULE

Loan detail & annuity schedule

Open simulation

L-DEMO-001 - contractual schedule projection; simulations never overwrite core records.

Original principal
10,000.00
AZN

Nominal annual rate
18.00%
Monthly periodic rate 1.50%

Scheduled installment
499.24
AZN - final payment adjusts

Contractual tenor
24 months
Regular end-of-period payments

Demo calculation: 10,000 AZN / 18% nominal / 24 months / no fees. First interest 150.00; first principal 349.24.

No.	Due date	Opening AZN	Interest AZN	Principal AZN	Total due AZN	Closing AZN	Status
1	20 Oct 2026	10,000.00	150.00	349.24	499.24	9,650.76	Overdue
2	20 Nov 2026	9,650.76	144.76	354.48	499.24	9,296.28	Upcoming
3	20 Dec 2026	9,296.28	139.44	359.80	499.24	8,936.48	Upcoming

S06 / RECORD VERIFIED CONTACT

Record verified contact

Structured outcome capture updates the customer case, promise, restrictions and next action together.

Customer contact context

Demo customer 001 / C-DEMO-001

Eligible now

Dialed contact

Verified mobile / masked

Language

Azerbaijani

Overdue amount

499.24 AZN

Current DPD

7

Priority / assignment

Bucket 10 / Senior agent

Approved script

Verify the right party before discussing debt. Explain the overdue installment, establish the reason, and record an affordable commitment.

Interaction & next action

Contact time: 27 Oct 2026, 10:00 Baku

Connectivity

Answered

Identity verification

Right party verified

Disposition

Verified customer conversation / PTP obtained

Reason for non-payment

Short-term cash-flow timing

Promised amount

499.24 AZN

Payment deadline

30 Oct 2026 / End of business day

Covered obligation

L-DEMO-001 / October installment

Agent note

Customer confirmed payment by 30 Oct. No repayment-plan change requested.

Saving applies the 120-hour demo call cooldown until 1 Nov, 10:00. PTP protection is evaluated separately.

Save outcome & promise

Cancel

Connectivity alone does not establish right-party contact.

S07 / PROMISES TO PAY

Promises to pay

Track customer commitments separately from actual received and allocated cash.

Create promise

Due today	Upcoming	Kept this month	Pending reconciliation
27	42	68.4%	4
Matured / pending shown separately	Not in the kept-rate denominator	Fixed matured promise cohort	Do not mark broken prematurely

Promise state: All active and recently matured

Deadline period: This week

Owner: My team

Customer	Promised AZN	Deadline	Paid / linked AZN	Remaining AZN	State	Owner
Demo customer 001	499.24	30 Oct 2026	0.00	499.24	Active	Senior Agent A
Demo customer 011	275.00	27 Oct 2026	275.00	0.00	Kept	Agent B
Demo customer 012	420.00	27 Oct 2026	150.00	270.00	Partially paid	Agent C
Demo customer 013	180.00	26 Oct 2026	0.00	180.00	Pending source	Agent D
Demo customer 014	325.00	25 Oct 2026	0.00	325.00	Broken	Agent E

Selected promise / C-DEMO-001

Scope: L-DEMO-001 / October installment

Cooldown to 1 Nov, 10:00

Routine calls resume only after all applicable restrictions expire.

S09 / PAYMENTS & RECONCILIATION

Payments & reconciliation

Open demo simulator

Verified core events drive balances, promises and task cancellation. A payment claim is not a posting.

Verified today	Unmatched events	Source lag	Idempotency checks
18,420.00	**3**	**2 min**	**Passed**
AZN - net posted amount	Review required	Within demo threshold	Replayed events are not duplicated

Lifecycle example: 499.24 AZN posted to L-DEMO-001 -> overdue cleared -> PTP kept -> obsolete call task cancelled.

Source transaction	Customer / loan	Amount AZN	Value date	Status	Reconciliation	Queue effect
DEMO-TXN-001	C-DEMO-001 L-DEMO-001	499.24	27 Oct 2026	Posted	Matched	Cancel obsolete task
DEMO-TXN-002	C-DEMO-012 L-DEMO-012	150.00	27 Oct 2026	Posted	Matched	Update partial PTP
DEMO-TXN-003	Reference missing	250.00	27 Oct 2026	Quarantined	Unmatched	Hold affected action
DEMO-TXN-004	C-DEMO-020 L-DEMO-024	-120.00	27 Oct 2026	Reversal	Linked to original	Reassess arrears
DEMO-TXN-001	Replay / same event	499.24	27 Oct 2026	Duplicate ignored	Already applied	No duplicate effect

Selected payment allocation

Interest: 150.00 / Principal: 349.24

Principal remaining after posting: 9,650.76 AZN

Claim versus verified status

"Already paid" opens a reconciliation task. Only refreshed authoritative payment and balance data can clear arrears.

S12 / COLLECTION STRATEGY DESIGNER

Collection strategy designer

Separate scoring, economic priority, chosen treatment and contact eligibility.

Run dry simulation

Draft 2026.10 / Not production approved

Population | Probability | Exposure / ERA | **Action bucket** | Contact policy | Dispatch

Action bucket	Recommended treatment	Phase 1 effective treatment	Assignment	Controls / fallback
1-4	SMS / email	SMS / self-cure	No routine agent call	Respect digital-contact policy
5-6	Robo call + digital	SMS fallback	No routine agent call	IVR unavailable / no silent call escalation
7	Robo / SMS + selective call	SMS + call if capacity	Regular agent if spare	After higher-priority eligible work
8-9	Agent call + digital	Structured agent call	Regular queue / priority	All customer restrictions still apply
10	Senior agent call	Senior call	Senior-only queue	Flag overflow; do not silently downgrade

Contact policy / version DEMO-01

Verified RPC: minimum 120-hour demo cooldown. Failed calls: risk-based retries. Active promises and contact restrictions can defer work further.

Activation governance

Dry-run the population and workload. Validate model coverage, fallbacks and restriction conflicts. Independent checker approves the effective version.

Maker cannot approve own change

S13 / PROMETEIA MODEL REGISTRY

Prometeia model registry

Draft model transcription with input mapping, scoring trace and explicit source discrepancies.

Test customer score

Production gate: confirm executable rules, Class 7 leaf label, DPD 10 boundary, exposure scope and exact feature transformations.

Feature mapping

Provider-computed inputs / latest approved monthly snapshot

DPD_MAX_MAX12	45
DPD_RATIO_ADJ_MAX12	0.30
DPD_RATIO_ADJ_V3LM	-0.50
DPD30_ADJ100_CNT_L6M	2
DPD_RATIO_ADJ_VLM	0.10

Decision path / Demo customer 001

- Customer DPD 7 -> 4-10 segment
- Maximum prior DPD 45 -> above 30
- Ratio change -0.50 -> at or below -0.40
- Class 8 -> roll probability 42.0%
- ERA = 0.42 x 10,000 = 4,200 AZN

Class	Probability	Key split	Implementation status
1-4	8% to 16%	Prior max DPD <= 30 / ratio splits	Draft rules / boundary tests required
5-7	22% to 36%	Prior DPD > 30 / change, count, ratio	Class 7 source discrepancy flagged
8	42%	Prior DPD > 30 / ratio change <= -0.4	Selected demo path
Unscored	Not assigned	Missing / stale / unsupported inputs	Manual-review queue - never default to zero

S14 / ACTION ECONOMICS & CAPACITY

Action economics & capacity

Compare scenario

Scenario assumptions guide prioritisation; measured incremental impact remains a separate analysis.

Early-arrears agents

6

Historical project input

Planning reference

480

Successful contacts/day

Agent unit cost

1.75 AZN

Per customer-day - draft input

Active channels

SMS + calls

IVR and email unavailable

Action channel	Unit cost AZN	Base uplift assumption	Break-even ERA AZN	Cost unit / operational status
Reminder SMS	0.031	0.3%	10.33	Per SMS / enabled
Robo call / IVR	0.20	1.0%	20.00	Per attempt / future capability
Manual follow-up	1.75	5.0%	35.00	Per customer-day / enabled

Capacity planning

Regular / senior agents	**4 / 2 - demo split**
Historical attempts per agent	**219 per day**
Historical worked customers	**107 per agent-day**
Historical reached customers	**82 per agent-day**

Calculation and interpretation

Break-even ERA = unit cost / assumed uplift

For manual follow-up: 1.75 / 0.05 = 35.00 AZN. Benefits are assumptions about risk-amount reduction, not guaranteed cash profit.

480 successful contacts is not 480 attempts. Failed calls and retries consume capacity.

S17 / TEAM ALLOCATION & OPERATIONS

Team allocation & operations

Simulate rebalance

Keep customer ownership, skill requirements and contact restrictions intact when allocating work.

Active agents	Eligible allocated cases	Attempts recorded	Verified RPC
6	132	256	128
4 regular / 2 senior - demo	Customer-level work items	Illustrative day-to-date activity	Not an incremental impact measure

Agent / role	Language	Assigned eligible	Attempts	RPC	Skill queue	Shift / operational state
Senior Agent A	AZ / RU	24	43	21	Bucket 10	Active / senior work
Senior Agent B	AZ / EN	23	51	26	Bucket 10	Active / authorized callbacks
Agent C	AZ	22	47	24	Buckets 8-9	Active / regular queue
Agent D	AZ / RU	23	38	19	Buckets 8-9	Active / regular queue
Agent E	AZ	21	42	21	Buckets 8-9	Active / regular queue
Agent F	AZ / EN	19	35	17	Buckets 8-9	Active / spare capacity review

Allocation rules

Restrictions -> due follow-ups -> skill and priority -> capacity -> atomic claim. Related loans stay with one customer owner.

Overflow and reassignments

Senior-only backlog remains visible. Any exceptional reassignment has an owner, reason and audit trail.

S21 / INTEGRATIONS & JOB HEALTH

Integrations & job health

Pause outbound work

Inspect source freshness, reconciliation and retry state without exposing secrets.

Core / payment freshness	Quarantined events	Outbound real sending	Duplicate replay
2 min	3	Disabled	Safe
Within demo threshold	Owned review queue	Demo adapters only	Stable business idempotency keys

Source / adapter	Mode	Last successful run	Lag / queue	State	Operational action
Core loans & schedules	Mock inbound	27 Oct / 09:58	2 min	Healthy	Inspect mapping / control totals
Payment / reversal feed	Mock inbound	27 Oct / 09:58	2 min	3 quarantined	Review unmatched references
Customer & contacts	Mock inbound	27 Oct / 09:55	5 min	Healthy	Inspect validity / preferences
Prometeia features	File / draft	Monthly snapshot	Approved window	Draft model	Validate feature mapping
SMS gateway	Local outbox	No real sends	0 dispatched	Real adapter off	Preview approved requests
Dialer / IVR	Not connected	Not applicable	Not applicable	Unavailable	Define bank interface contract

Execution safeguards

Payment events refresh balances and invalidate obsolete tasks. Queue claim and dispatch re-check source freshness and contact eligibility. Retries, unknown provider responses and event replays preserve idempotency and an audit trail.
